## DETAILED ACTION

### *Specification*

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-8 are being rejected under 35 U.S.C. 102(a) as being unpatentable over Kyocera Corp (JP 2000-114354 A).

As to claim 1, Kyocera Corp shows, referring to figures 1a and 1b, a ceramic substrate 2 having a conductor layer 3 formed inside and there is a supporting case 2. There is a connection between the conductor layer 3 and the external terminal 7. The manner in which the connection between the conductor layer and the external terminal is performed is not being given any patentable weight.

Art Unit: 2826

**Claim 2 is product-by-process claims:**

Note that a "product by process" claim is directed to the product per se, no matter how actually made, *In re Hirao*, 190 USPQ 15 at 17 (footnote 3). See also *In re Thorpe*, 227 USPQ 964, 966; *In re Luck*, 177 USPQ 523; *In re Fessmann*, 180 USPQ 324; *In re Avery*, 186 USPQ 161; *In re Wertheim*, 191 USPQ 90 (209 USPQ 554 does not deal with this issue); and *In re Marosi et al.*, 218 USPQ 289, all of which make it clear that it is the patentability of the final product per se which must be determined in a "product by process" claim, and not the patentability of the process, and that an old or obvious product produced by a new method is not patentable as a product, whether claimed in "product by process" claims or not. Note that applicant has the burden of proof in such cases, as the above case law makes clear. See also MPEP 2113.

Claim 2 does not distinguish over the Kyocera Corp reference regardless of the process used to connect the conductor layer to the external terminal, because only the final product is relevant, and not the process of making.

As to claims 3 and 7, the connection is made through a non-oxidizable metal layer

As to claims 4, 6, 7 and 8, the connection between the conductor layer and the external terminal is performed on a face of the substrate opposite the face for processing the semiconductor.
